

IMS Building Solutions for the Future

Challenge:

Leaders of the envisioned elementary school dreamed of providing less privileged, urban students with a top of the line school facility and learning experience. The vision required a creative and cost effective solution.

Alternatives Reviewed:

1. Site built construction of the entire project.
2. Build a 2 story school combining 50 modular units with site built construction finishes— the IMS Solution

Solution:

Discussion with school leaders identified the desire for a permanent solution done as quickly and cost effectively as possible without sacrificing quality and insuring a Fall start to school. The modular portion of the building was installed in less than a week and the 61,000 square foot school was completed for an August grand opening.

The hybrid blend of modular and site built construction techniques resulted in a dream come true for the leaders, the staff, the community and the children of this exciting school facility. This is an example of modular at its best!
